

Tech:
Barry DeLass

Proj:
Turbo 2 by Window Repair Systems.

Procedure:

A life cycle test was performed to two groups from Turbo 2. Each group had two balances included.

Data:

Group (1) consisted of (2) 11", 15 lb. Turbo 2 balances.

Group (2) consisted of (2) 30", 56 lb. Turbo 2 balances.

Both groups ran 16000+ cycles. I stopped the test after 16000 cycles, reason for this is balances have to go 4000 cycles to pass AAMA specs. Turbo 2 balances performed 4 times AAMA requirements.
